

Professional document systems

Contributed by Océ

Océ helps the people who make our world.

Companies everywhere use Océ technical documentation systems in manufacturing, architecture, engineering and construction. High-speed Océ printing systems produce millions of transaction documents each week, such as bank statements and utility bills. And in offices around the world, people use Océ professional document systems to keep the wheels of business and government turning. Océ is also at work in publishing on-demand, news-paper production and wide format colour for spectacular display graphics. It's a proposition called Printing for Professionals.

Professional document systems

Océ is one of the world's leading companies in the area of document management. In advanced research centres and high-tech production facilities, the company develops products and services for efficient and effective exchange of information. These comprise systems for the reproduction, presentation, distribution and management of documents. Océ systems are renowned for their high quality. This is based on reliability, productivity, durability, ease of use and environmental friendliness. In its 125-year history, Océ has built up a solid reputation as an innovator, both technologically and commercially. The focus is on professional user environments, particularly on those where high document volumes are processed.

Océ Enterprise-wide Document Architecture

The Océ Enterprise-wide Document Architecture concept ensures an integrated document approach for business solutions – to protect the value of an organisation's operations and investments. Across the entire process, Océ delivers all the software, systems and services for document and workflow management. Océ helps organisations to transform analogue documents into digital, data into structured documents and document communication into added value.

- Océ is active in approximately 80 countries, with direct sales and service organisations in some 30 countries. Océ employs 22,000 people worldwide. Annual revenue exceeds e2.7 billion.

Océ Enterprise-wide Document Architecture

- The Information Processing component encompasses data from all business-critical transactions.
- Simultaneously, the Capture & Scan process collects analogue and digital documents.
- With easy access to all this information, the Creation & Design process generates high quality internal and external business documents.
- These documents, which are still digital, are then efficiently and timely deployed to their designated location through the Distribution & Control stage.
- Finally, the Produce & Deliver process handles the output of every document to the appropriate channel, to induce the intended interaction with the target audience.
